

MacIntosh Well Tasting Night

**Come taste our new well water.
Help us determine the new blend!**

**Wednesday January 15, 2014 at 7 pm
Town Hall, 186 Main Street, Newmarket, NH 03857**

The Town of Newmarket is working to increase the reliability of our water supply by blending the new MacIntosh well with the current supplies from Bennett and Sewall wells. The new MacIntosh well will provide more water and pressure to meet water demands throughout the year. The water from the new well, however, has a different mineral composition compared to the Bennett and Sewall wells, which may vary the taste of the water. Therefore, we are having a “water tasting” event to perfect the blend.

The Water Department invites everyone to come taste the new blends of water and meet a water quality scientist and design engineer who will talk about the:

- Quality of the well
- Results of a Flavor Profile Analysis of the water
- Expected difference in taste
- Water Department’s approach to prevent water staining from natural manganese in the well water.
- Scope of new construction

The results of your taste test will be tallied and presented at the end of the meeting.
